

PRO[®]

Go-Kit

Everything you need to restore fiber communications... in a backpack!

Are you a:
Contractor?
Technician?
First Responder?
We've made a kit
just for you...

Precision Rated Optics

Work with a **PRO!**

Everything you need - in a backpack!

Whether you are an installer, technician or emergency responder, there's nothing more convenient than having all your equipment ready to go when a job springs up - we know this from experience. With the PRO Go-Kit you will have everything you need to clean, test, inspect and connect fiber communications conveniently stored so you can "grab and go".

Everything a technician needs to inspect, diagnose, repair and test fiber optic networks is contained in the water-resistant Go-Kit, including a hard-shell enclosure for up to a 17" laptop!

With a variety of configurations to choose from, there's a kit to suit every task and every budget. For less than the price of a single splicer from a competing manufacturer, you can have everything you'll need to get the job done - in a backpack!

The Challenge: If you can find a competing manufacturer's equipment and supplies, with the same or better specs, at a lower price, we'll meet or beat the price.

Building the Perfect Go-Kit is as Easy as 1, 2, 3...

It begins with the backpack...

This is no ordinary backpack. All PRO Go-Kits are housed in backpacks designed and manufactured by the world-renowned Pelican Case company. Water resistant, light weight and practically bullet-proof, they feature a lifetime guarantee, and can safely store and transport all of your test equipment, hand tools and cleaning supplies. There's even a special hard-shelled compartment to accommodate up to a 17" laptop!!

Industry-Specific Equipment 1

Each Go-Kit has been configured with a rugged ultra-reliable Fusion Splicer, along with an OBL, OFL or OTDR to best suit every application and budget. As always, if you don't see what you need, give us a call and let the experts at PRO design a kit that best fits *your* exact needs.

Test Equipment 2

Whether it's installation, maintenance or a complicated emergency restoration - every technician needs certain equipment. We've bundled our most popular, reliable test equipment and include it in every Go-Kit. Inside your pack, you'll find a ruggedized Power Meter, Light Source, Fiber Identifier, Visual Fault Locator and Video Inspection Probe for fast, reliable fiber installation or restoration.

Cleaning Supplies & Tools 3

Certain cleaning supplies and hand tools are needed on *any* fiber job. We've chosen the most commonly-used items and included them in every kit - at no extra charge! If there is a specific tool or supply that you require, but that is not shown, just let us know and we can often make substitutions, based on your specific needs.
